

## PRODUCTS TECHNICAL DATA

**PRODUCT NAME : Flow aid additive, ME-ADA**

### COMPOSITION / INFORMATION ON INGREDIENTS AND APPLICATIONS

Acidization fluid drainage aid, ME-ADA

ME-ADA contains a variety of surface active components, which can improve the reverse flow rate of formation fluid and effectively enhance the operation effect. It has good water solubility and acid solubility, and can be compatible with other acidizing agents. ME-ADA is suitable for acidizing fracturing operation in oilfield. Acidizing fluid drainage aid can obviously reduce the interfacial tension of water and oil, can reduce the flow resistance of liquid in the drill core, then to achieve high efficiency of clean up's function, meanwhile to prevent the liquid which flowing into the well emulsify together with crude oil, can be widely used in Oil well fracturing, acidification, cleaning wells and other Construction works.

Application scope and main characteristics

1. This product is suitable for acidizing fracturing operation in oilfield.
2. Recommended dosage: 0.5-2%. When using, add the designed amount of ZP into the main treatment solution and mix evenly.

Appearance: colorless to light yellow liquid. Recommended dosage: 0.5-2.0%
